

Improvement for EDTC: 3771 Technologies for Teachers (WebQuest)

First, the font used in the project should have been the same in all the website pages. However in the WebQest different font were used throughout the project. Having a common font in all the pages would have improved the appeal of the project. There is no uniformity in utilizing the website pages. Adhering to uniformity in all the pages of the project could have made the website more attractive to the reader.

The background color of the website was not that attractive to the reader. The project would appear more appealing with a textured and multicolored background. Such colors would have been more ideal for the WebQuest. The blue color of the text would easily confuse the reader with the commonly color that is used for links. Black color for the text would have been very appropriate for this kind of project.

Finally, a number of links appear not to be working. This was because the source of the materials used to construct the website changed with time. Choice of more permanent source of material for reference would have made the WebQuest more viable for a long period of time. The project used sources such as newspapers and news outlets that changes more frequently. This make the visitor of the website to wonder about the authenticity of the material used in the project.
