

## **Improvement of EDTC 6960: Educational Technology and Professional Development**

The assessment of the knowledge of the audience was not well carried out in this project where a survey was used to assess the knowledge of the audience. This was only applicable because one of the group members was a teacher in the school where the project was to be carried out. In the future I would like to carry out a similar project where the knowledge would be applicable to all audience and therefore no need of accessing the prior knowledge of the audience. This would be something that universally applicable to their profession.

The availability of equipment in the school guided the projects that will be carried out. There were other viable projects we could have carried out but it was not possible because of the lack of equipment. Having one own equipment of software that are required in the project would have not us not to be limited on our choice of the project to carry on among the teachers.

The cost of the project was a limiting factor on the choice of the topic to carry out. We choose those projects that would add no cost to our audience. We know that our audience could decide to attend the sessions of the basis of the cost that they may incur. We eliminated many good projects that we could have carried out because they would have added some cost to our audience. I would prefer to carry out the same project with considering the cost factor. This would bring up project that are more current and applicable in today's classroom that what we did in the current project.
